

# CHRISTENSEN'S PLANT CENTER

## Wholesale Supplier To Landscape Professionals

### Taken by storm!

Continuing our effort to improve our inventory variety to benefit our customers and their clients, we are excited to share some interesting new plants with you. One example brought to my attention leaping through our expertly designed catalog is *Chaenomeles speciosa*, a.k.a. Flowering quince. Double Take™ is a new series with double flowers in eye-catching colors.

'Orange Storm', 'Pink Storm', and 'Scarlet Storm' will be available this year. Under-utilized in the planting game, our new addition to your planting palette lends itself well both in versatility and color. The stunning blooms are also good for cut flowers, and once established, the thornless, fruitless branches resist drought and deer damage. It's mounding habit makes for good mixed borders, hedges, or mass plantings.

Planted in part to full sun, Double Take™ grows to 3-4' tall. It has the ability to enhance your client's landscape as an additional early season color choice. Already in stock waiting to make your client's landscape set itself apart from everyone else's.
