Wholesale Supplier To Landscape Professionals

KEEP YOUR SOIL MOIST!

"Soil Moist" is a polymer designed to reduce watering that is extremely beneficial in dry weather. This product can help reduce watering by 50%.

It can be used in containers, transplanting, and even under turf sod. The key to this product is to incorporate it around the root zone, but keep it away from the top 2 inches of soil. Then water in thoroughly. Please read the directions carefully.

This extra step will allow your plants to thrive, especially in this warm weather.

Thanks, Antonio

Antonio Vigil
