

CHRISTENSEN'S PLANT CENTER

Wholesale Supplier To Landscape Professionals

Plants that are truly special....

They come to me by e-mail, fax, on yellow sheets or sometimes literally scribbled on the back of an old McDonald's wrapper. What I am talking about are special plant requests from you, our customers. They range from new varieties to sizes that we do not stock, (like the 22' Concolor Fir that I found for a customer, and arranged to have dug in 2011). It is challenging and fun to find them, and even more satisfying to see you pick them up for installation on your client's project.

As these requests continue to come across our desks and we start to see a building trend of special requests for an item, I start to consider adding to our inventory. Some recent additions to our stocking inventory that have started with special requests are Thuja 'Green Giant', Hydrangea paniculata Pinky Winky™, Acer pseudoplatanus 'Eskimo Sunset', fruit trees in field-grown caliper sizes, and a few native varieties, such as Fagus grandiflora.

So keep them coming! If you do not see it, ask your salesman to put in a request for you - you never know, one day you just may walk into Christensen's Plant Center and see it in inventory.
