Wholesale Supplier To Landscape Professionals

Preemergent Herbicide & Fertilizer

Spring is here and NOW is a great time to apply preemergent herbicide (Treflan) and fertilizer to existing landscape plantings.

These are great income-generating activities to start the year before the season gets rolling. It's much easier to work around dormant shrubs and especially perennials this time of year. The added weed control and nutrition will greatly enhance the appearance and performance of the plants.

The Treflan and fertilizer can be easily applied prior to mulching or incorporated into the soil with a garden rake. Studies have shown that the weed control is significantly lengthened with a layer of mulch. It is crucial any existing weeds are removed before adding Treflan.

We sell Treflan and a great selection of Espoma organic fertilizers that can be matched up to the specific types of plants you want to feed.

Thanks, Kevin
