

CHRISTENSEN'S PLANT CENTER

Wholesale Supplier To Landscape Professionals

Algae in your pond? So many products!

Our practical-minded owner often questions why we have multiple items in stock for the same purpose. Like, why do we carry three different round point shovels? Our customers have their own opinion of what works best, so as a purchaser I try to please as many of our customers as I can.

Nobody likes algae in their customer's pond so what do they use? We carry an assortment of products, sorry Tim!

Pond 2 O is a new product for us this year (Why Dan?) It is an excellent late spring application for algae forming on the bottom that you don't see yet. Like all algaecides it will need re-treatment during the season. It has a 30 day residual. **DO NOT USE IN KOI OR TROUT PONDS!** Toxicity related to water softness. Immediately 100% safe water use for humans.

Algaway 60 is another product not to be used in water containing fish.

It is an algae eliminator formulated for decorative ponds and fountains, irrigation and retention ponds. Algaway 60 eliminates most planktonic and filamentous algae quickly and efficiently and there's no phytotoxicity so water is safe for irrigation, turf and shrubs.

BUT I HAVE FISH!

Well sir, than you would want to use one of these two products:

Green Clean Algaecide kills algae on contact, visual results in minutes - your customers will love it. It comes in granular or easy to measure tablets.

Algaefix is another "retail friendly" product that kills and controls algae in your fish ponds. Repeat application every 3 days until all algae is controlled.

Please come in for all your pond needs! If I still have a job I will get it for you.

Dan Alessandrini
